PROPERTY TYPES

TRACTION

CHARACTER-DEFINING FEATURES

## Characterize Your Data

After survey data is gathered and the context is consulted, a characterization of the surveyed property should occur. Did you identify a nineteenth- or twentieth-century property or both? What form of energy was used for the study system? Is the property type considered significant under that context? This flow chart is presented to assist with identification and the dating process. It lists the property types and their character-defining features for each mode of traction used for streetcar systems in Georgia over the course of the late nineteenth and early twentieth centuries, thus providing a tool for dating and classifying these resources.
